Title: Exception Handling in Python

Program:

Exception handling example

try:

 a = int(input("Enter first number: "))

 b = int(input("Enter second number: "))

 result = a / b

 print("Result:", result)

except ZeroDivisionError:

 print("Error: Cannot divide by zero")

except ValueError:

 print("Error: Invalid input (only numbers allowed)")

finally:

 print("Program execution completed")

Another example

try:

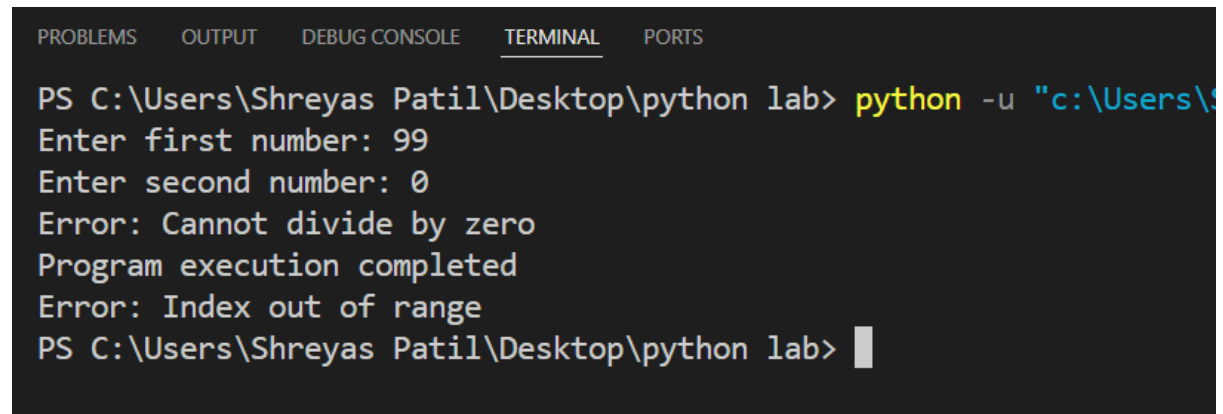

```
lst = [1, 2, 3]
```

```
print(lst[5])
```

```
except IndexError:
```

```
    print("Error: Index out of range")
```

Output:

The screenshot shows a terminal window with a dark background and light-colored text. At the top, there are tabs labeled 'PROBLEMS', 'OUTPUT', 'DEBUG CONSOLE', 'TERMINAL' (which is selected and underlined), and 'PORTS'. The terminal content shows a command prompt 'PS C:\Users\Shreyas Patil\Desktop\python lab>' followed by the command 'python -u "c:\Users\Shreyas Patil\Desktop\python lab\program1.py"'. The program's output is displayed line by line: 'Enter first number: 99', 'Enter second number: 0', 'Error: Cannot divide by zero', 'Program execution completed', and 'Error: Index out of range'. The prompt returns to 'PS C:\Users\Shreyas Patil\Desktop\python lab>' with a white cursor at the end.

```
PS C:\Users\Shreyas Patil\Desktop\python lab> python -u "c:\Users\Shreyas Patil\Desktop\python lab\program1.py"
Enter first number: 99
Enter second number: 0
Error: Cannot divide by zero
Program execution completed
Error: Index out of range
PS C:\Users\Shreyas Patil\Desktop\python lab> 
```
