Roll No: 24141044

Title: String operations in Python

Program:

```
# String operations in Python
```

```
text = input("Enter a string: ")
```

```
print("\n--- BASIC OPERATIONS ---")
```

```
print("Original:", text)
```

```
print("Uppercase:", text.upper())
```

```
print("Lowercase:", text.lower())
```

```
print("Length:", len(text))
```

```
print("Reversed:", text[::-1])
```

```
# Counting characters
```

```
char = input("Enter character to count: ")
```

```
print("Count:", text.count(char))
```

```
# Slicing
```

```
print("\n--- SLICING ---")
```

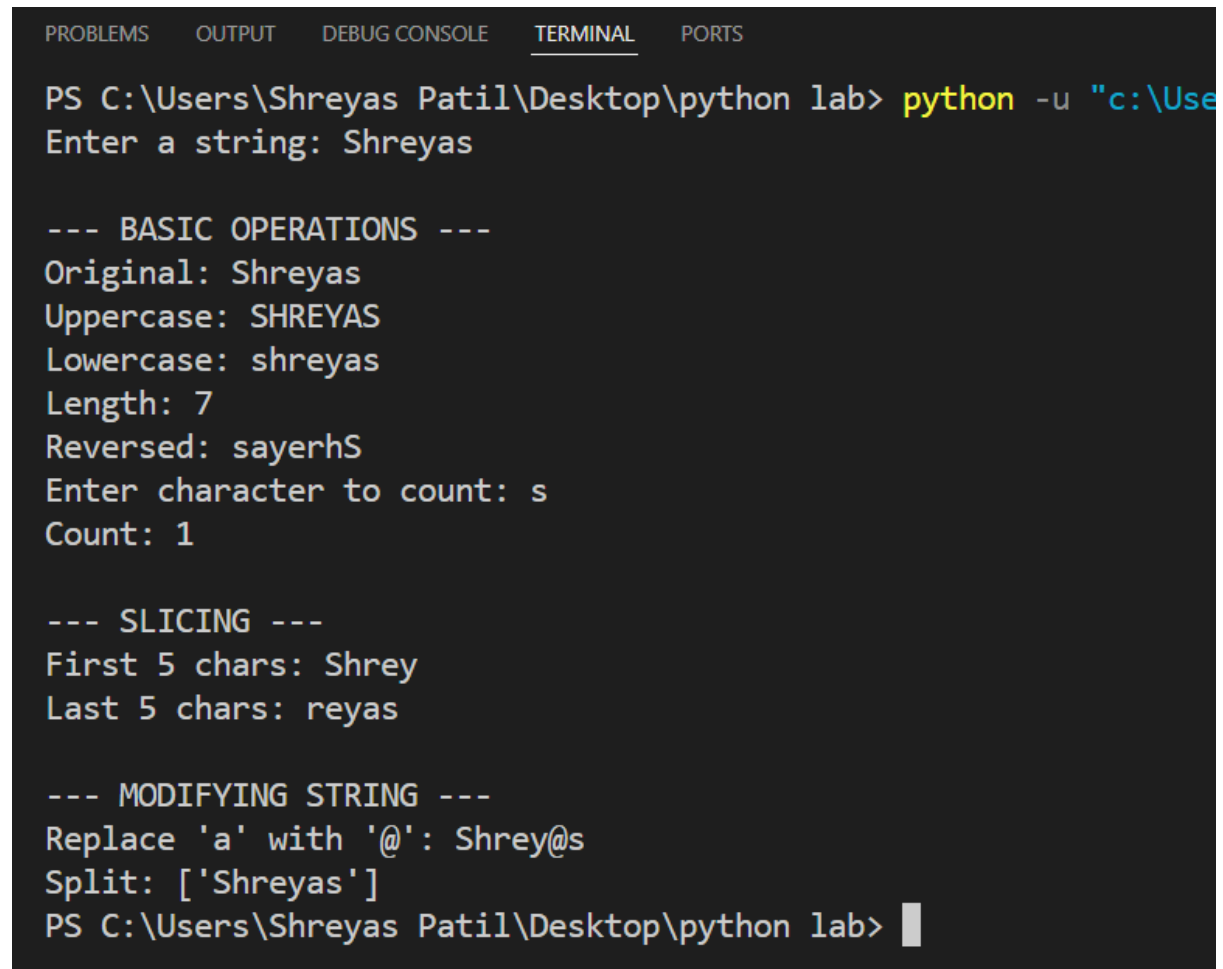

```
print("First 5 chars:", text[:5])
```

```
print("Last 5 chars:", text[-5:])
```

```
# Replace and split
```

```
print("\n--- MODIFYING STRING ---")  
  
print("Replace 'a' with '@':", text.replace('a', '@'))  
  
print("Split:", text.split())
```

Output:

The screenshot shows a terminal window with a dark background and light-colored text. At the top, there are tabs for 'PROBLEMS', 'OUTPUT', 'DEBUG CONSOLE', 'TERMINAL' (which is active), and 'PORTS'. The terminal content shows a command prompt 'PS C:\Users\Shreyas Patil\Desktop\python lab>' followed by the command 'python -u "c:\Use...'. The program then prompts 'Enter a string: Shreyas'. It displays a menu of string operations: '--- BASIC OPERATIONS ---', 'Original: Shreyas', 'Uppercase: SHREYAS', 'Lowercase: shreyas', 'Length: 7', 'Reversed: sayerhS', and 'Enter character to count: s'. The output for counting 's' is 'Count: 1'. Next is '--- SLICING ---', showing 'First 5 chars: Shrey' and 'Last 5 chars: reyas'. Finally, it shows '--- MODIFYING STRING ---', 'Replace 'a' with '@': Shrey@s', and 'Split: ['Shreyas']'. The prompt 'PS C:\Users\Shreyas Patil\Desktop\python lab>' is visible at the bottom.

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS
